Dependencies

- OS:Should work on Any Ubuntu and its derivatives
- grip
- wkhtmltopdf
- Should have internet connection to run the script

Customization

This script is intended to convert .py files. Can be Customized for other language files

Instructions for Customization

- In `output_pdf = fileName.replace('.py','.pdf')` replace .py to Your file extension
- In below section replace `#` with comments of the language Ex :In Java and javascript it's `//`

```python
text_style = string.startswith('#')
code_style = not string.startswith('#')
start = string.startswith('# start')
end = string.startswith('# end')
```

- In `return """```python"""` replace python with your own language Ex java, javascript etc Refer git-hub markdown syntax

Convert any program file to PDF

- This script will help to write tutorials for programming
- This script is intended for Python Progrms
- Refer the examples to view the out put pdfs

Instructions while writing the program

- Follow the markdown syntax while writing comments
- Write comment start before the code block
- Write comment end after code block

Usage

- `py_to_md -i <file_name>`
- Out put will be saved as file_name.pdf
